User Scenarios

1. Admin: Grace the Grand Organizer

Scenario Title: *"Grace Prepares for the Monthly Review"*

Scenario:

Grace logs into Nestify-MS with her admin credentials. From her dashboard, she first checks staff attendance for the month and generates a PDF report. She then navigates to the enrollment section and notices two pending applications. After reviewing each child's medical and personal details, she accepts one and rejects the other.

She proceeds to update the accepted child's profile in the system. Lastly, she schedules a parent-teacher meeting event for next week and sends out automated notifications to all relevant parents and teachers. Grace logs out feeling accomplished, knowing everything is stored, sent, and ready.

2. Chef: Benny the Balanced-Meal Boss

Scenario Title: *"Benny Makes the Weekly Menu Plan"*

Scenario:

Benny starts his shift by logging into Nestify-MS using his chef account. He first reviews the updated child medical records to identify allergies or dietary needs. He notices a new child is allergic to peanuts, so he updates the week's meal plan to exclude any related ingredients.

He then checks the inventory — milk and rice are running low — so he schedules a restock alert.

Once the menu is finalized, Benny clicks "Notify Parents" to send out the week's meal plan. Parents receive it instantly. Benny wipes his hands, satisfied and peanut-free.

🧹 3. Sanitar: Lila the Clean Queen

Scenario Title: *"Lila Tackles a Busy Cleaning Day"*

Scenario:
Lila logs into Nestify-MS from the sanitation team's tablet. She checks the daily cleaning checklist assigned to her and marks the first few classrooms as completed. While checking the restroom, she finds a broken soap dispenser and logs the issue using the "Report Problem" button.
The system auto-notifies maintenance and flags the restroom as "Needs Attention."
At the end of her shift, Lila reviews her tasks, adds a quick comment on a classroom that needed extra work, and finishes her log. All records are timestamped and saved for admin review.

👩‍🏫 4. Teacher: Tom the Trusty Tutor

Scenario Title: *"Tom Takes Attendance and Preps for the Big Event"*

Scenario:
Tom signs into Nestify-MS and sees the list of students in his class. He opens the "Take Attendance" page and starts marking students present and absent. He notices one child is absent without prior notice, so he clicks "Notify Parent" and sends a message automatically.
Later, he prepares for the upcoming science fair by reviewing the "Events" tab. He confirms his participation and sees a list of parents who've RSVP'd. He sends a message through the platform to remind them to bring the kids' projects by tomorrow.
Nestify-MS helps Tom stay organized and focused on the fun stuff — like volcano experiments.

👨‍👩‍👧 5. Parent: Nina the Nurturing Mom

Scenario Title: *"Nina Checks In on Little Zoe"*

Scenario:

Nina opens the Nestify-MS app while waiting in line at the coffee shop. She logs in and sees her daughter Zoe's attendance — she was present today. She checks the "Meal Plan" tab and is glad to see healthy options like vegetables and fruit smoothies.

She then looks under "Upcoming Events" and sees a notice for a parent-teacher meeting. She confirms attendance with a single click.

Finally, Nina leaves a short note of appreciation in the feedback section: "Thank you for keeping us informed. Zoe loves the new food!" The system sends a warm auto-response. Nina smiles.
